WHERE IT GOES  
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cap: disc 124 x 8, printed flat. A 6 mm hole at the centre for the probe tube; three 5.5 mm holes on the 84 mm circle (as the plates).

Two M5 heat-set inserts in the top face, 30 each side of centre on the line along the cross arm: 6.8 mm holes, 8 deep.

Probe tube: cut 76 mm of 6 mm aluminium tube; deburr inside.

Thread the 4-core probe lead up through it; glue the SHT45 board to the lower end with neutral-cure silicone, sensor facing down.

Fit: the tube goes up through the cap and the arm's 8 mm hole; the board then hangs 57 mm below the cap, in the middle of the stack.

A bead of silicone holds the tube in the cap.

Check: the board does not touch any plate (19 mm clear).
