WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. Block 100 wide, 50 tall, 24 deep, with a 140 degree V across its full height. The flat back goes on the rail; the V faces the pole.
V: apex 8 mm in front of the back face, 87.9 mm wide at the front face.
Band groove: 14 mm tall, 1.5 mm deep, across the whole back face, centred on the height. The band runs in it, between saddle and rail.
Print standing on the 100 x 24 end, so the V profile is on the bed.
Two M5 heat-set inserts, 6.8 mm holes 10 deep in the back face, 14 mm each side of centre and 16 mm above the middle (lower saddle) or below it (upper saddle): print one, turn the other over.
Fit: two M5 x 16 countersunk screws from the front of the rail.
A 140 mm pole touches the V faces 24 mm each side of centre; a 200 mm pole 34 mm; an 80 mm pole 14 mm. Never on the V's edges.
Check: on a pole or tube it must not rock.
