WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Hood: top disc 92 OD x 8, skirt 50 deep with 1.2 walls,
printed upright; six 8 mm drain slots at the foot of the skirt.
Three sockets on a 50 mm circle (90, 210 and 330 deg), 19 OD with a
15 mm bore, open at the bottom, to hold a 13 mm Palmes tube each.
Two M5 heat-set inserts in the top face, 30 each side of centre: 6.8 mm
holes, 8 deep. Three clips (18 OD, 12.8 bore, 8 high, 3 mm slit).
Fit: tubes pushed up into the sockets, open end down; a clip on each
tube just under its socket. Two M5 x 10 screws down through the arm.
Tubes come from the laboratory (not in the BOM); the partner changes
them every two to four weeks. Fitted at the anchor node and one in five.
Check: the hood clears the pod by 22 mm and the shield cap by 14 mm.
