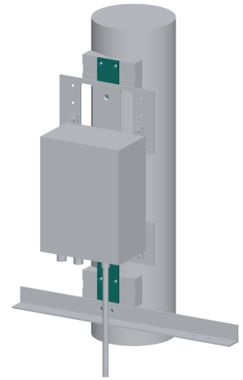
RIGHT VIEW

Scale 1:5; looking at the right side (along -X)



WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 451 mm of 40 x 4 mm flat bar; square and deburr the ends.
Heights up from the bottom end; the front is the face away from the pole.
Saddle screws: 5.5 mm, 14 mm each side of centre, 67 and 442 up;
countersink from the front so M5 countersunk heads sit flush.
Cross arm bolts: 5.5 mm, 10 mm each side of centre, 16.5 up.
Adapter plate bolts: 5.5 mm on the centre line, 119, 169, 316, 386 up
(plain holes: the countersinks are in the plates).
The saddle centres are 51 and 426 up (375 mm apart).
Fit: saddles behind, plates and cross arm in front; see the build plan.
Check: lay the plates and arm on it; every hole lines up.
