WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 415 mm of 30 x 30 x 3 angle; square and deburr the ends.
Positions from the left end (seen from the street).
Upright leg (goes on the rail): two 5.5 mm holes at 155 and 175,
16.5 mm up from the underside of the flat leg.
Flat leg (points to the street): 15 mm in front of the back face:
pod screws 5.5 mm at 25 and 125; probe tube 8 mm at 365;
cap screws 5.5 mm at 335 and 395.
Fit: upright leg flat on the rail front, its underside 451 mm below
the rail's top end (flush with the rail's bottom end); two M5
bolts, heads behind the rail, nyloc nuts inside the angle.
The pod and the shield cap hang under the flat leg on M5 screws
put in from above.
Check: the flat leg is level when the rail is upright.
